

Case overview with evidence links -

OVERVIEW: Google, and its cartel of VC's and business associates, knew Plaintiff for many years, even before there was a Google. Plaintiff built “the first Google” and “the first YouTube” (owned by Google) and a number of other technologies which existed as products offered in the market, that Google examined and later copied. In one of the biggest technologies, Plaintiff won a Congressional award to help American energy and national security needs. Covertly, the Google executives, VC's and staff owned the competing technology, which later failed as a product and a financial scheme. Google intercepted the state and federal dollars that Plaintiff was about to get and put that money in their bank accounts. Google then spent tens of millions of dollars sabotaging and internet rigging character assassination attacks against Plaintiff to make sure he could not compete with Google. Plaintiff has been asked to assist with federal, and international investigations, of Google. Top law enforcement, news media and public interest investigations now prove illicit actions on the part of Google. U.S. Congressional staff and law enforcement provided Plaintiff with information which motivated this case to move forward. Google was **recently discovered** to have had “illegal control of U.S. Government offices in a manner which was used to gather potentially criminal access to nearly a trillion dollars of taxpayer cash without any public transparency..”, according to investigators. In the course of the Google Cartel's ill conceived schemes, innocent Americans were targeted and attacked.

SF Superior Court Case Management Conference Scheduled for August 2016
Quantified damages exceed \$1B
