

Preface to Project Publications List and Reports

The pages that follow give details of the technical results obtained during Task 12. They consist of a **List of Publications and Presentations** resulting from each project, followed by brief individual **Project Reports**.

The List of Publications and Presentations was compiled from inputs provided by the Project Leaders. They represent publications or presentations that were completely or at least partially derived from IEA Task 12 work. [PU] indicates a publication and [PR] a presentation. There are a few patents, included as publications. The list is long, on the order of 150 entries, and represents an impressive measure of the scientific and technological contributions made to the hydride and carbon communities by this 5-year IEA effort.

A publication quality formal Report is included for each Project. They are largely as submitted by the Project Leaders. They were edited only for general form and obvious typographical errors, so they faithfully represent the work and conclusions of the authors. The 2-8 page reports either broadly summarize the accomplishments of the projects or focus on one or two key technical findings. In either case, they generally do not cover all the results derived from a given project. The Publications List will allow the reader to seek more detail.

All 20 projects are represented here. The Operating Agent is grateful to the Project Leaders and associates for the 100% participation in this Task Final Report.
