**PERSONAL BIOGRAPHY:**

Mr. Sigmar H. Tullmann, is President and CEO of Safe Hydrogen. He is new to hydrogen storage, and has spent most of his 30 year management career in the data storage industry. His prior position was President and CEO of DataStoreMedia, Inc. He founded the \$60 million company as a spin-off from BASF Corporation in 1996. A frequent speaker at data storage industry forums, he has published numerous articles about enterprise tape storage systems. Mr. Tullmann received his BA from Ohio Wesleyan University, an MS from Boston University, completed a management training program at the Harvard Business School, and served the Peace Corps as a small business consultant in India.

**COMPANY PROFILE:**

Safe Hydrogen is poised to launch a storage and generation technology that stores high concentrations of hydrogen in a patented chemical slurry. Hydrogen is generated, only when needed, by the simple addition of water. The technology was developed in a 3 year, \$ 3million project funded by the DOE. The technology eliminates the need for major fueling infrastructure modifications. The pumpable slurry can use current pipelines, tanker trucks, and filling stations. The slurry's volumetric density of hydrogen is twice that of liquid hydrogen and exceeds all other alternatives. The slurry is nontoxic, safe to handle, and will be continuously recycled. Costs are in line with other current hydrogen fueling options
